See the Fairbanks-Morse Conservador
Before Buying an Electric Refrigerator

Only the Fairbanks-Morse has the Conservador, a room divider immediately behind the main door that carries an array of clothes bars for storing most frequently used items. By conserving the cold, it cuts down use of electric current.

The Conservador provides more usable space, thus making each Fairbanks-Morse unit equal to one much larger in other makes.

Let us tell you about these points and others confirming this wonderful new electric Refrigerator.

**Chevrolet's high-compression valve-in-head engine gives economy without equal!**

Every test proves it's more economical... Every Chevrolet owner knows it's more economical... And every person will readily understand these simple A-B-C reasons why it is more economical

The Chevrolet engine is the most economical automobile engine produced today, because (1) it is a six-cylinder engine, and (2) it is a high-compression valve-in-head engine. In normal use, the high-compression valve-in-head engine produces more power per ounce of gasoline—because the high-compression valve-in-head engine is designed to provide more power per ounce of gasoline—because the high-compression valve-in-head engine is designed to provide more power per ounce of gasoline. Moreover, the high-compression valve-in-head engine provides for the disposal of the waste gases and oil—because six cylinder, are the most economical combination used in modern automobiles. ... Its high-compression valve-in-head design gives greater conversion of heat into power—saving... Most important of all, Chevrolet's space-efficient cooling system, pressure stream cooling and the greater accessibility of all working parts result in more dependable operation, over a longer period of time, with the lowest maintenance costs.
