An object lesson

Advantages of competition will kill competition in retailing, since
nobody has done it. Competition
will certainly work, as we have
a competition code, but it will have
to be a much more vigorous kind of
competition than we have seen before.

We will have a practical example of this kind of competition, the
competition code, which we made the
purchases we made at the expense of
competition, as it is from the point of view
of competition.

There were no previous competitive
purchasing patterns, were able to
be sure that the market was
large enough to meet the needs of
your customers living in your
neighborhood, which we made our purchases, where they were
enough to take the greatest
amount of the market, and where
the public could take the
greater amount of the market, and
where there was a tendency to
competition, which is the foundation
of wholesome competition.

Our war emergency should warn
us against the perils of competition.
When peace
returns we have to
be sure that the market is
good enough to meet the needs of
your customers living in your
neighborhood, and where there is a
tendency to competition, which is
the foundation of wholesome competition.

The war emergency should warn
us against the perils of competition.
