Holland Named To Head City Schools Again
All Principals Are Re-Elected By School Board
HOLIDAY CHANGED
W. L. Holland was re-elected as principal of the city schools and all principalships were voted to remain unchanged.

Among the 200 students of city schools who will be elected are: W. L. Holland, principal; Miss W. L. Holland, principal, and Miss W. L. Holland, principal, of the city schools.

The election was held in accordance with the provisions of the city schools and all principalships were voted to remain unchanged.

Mrs. Roberson Hurt in Accident
Mr. L. C. Roberson, a member of the city schools staff, was injured in an accident yesterday when his car was hit by a truck on the city road near the city school. He was taken to the hospital and is expected to make a complete recovery.

FORECAST: Cold with occasional rain. West North West.

Every 53 Seconds

Every 53 seconds a fire breaks out in the United States. Most of these are the result of some careless act—lighting cigarettes, playing with matches, using flammable materials carelessly. Many accidents do not even occur in a fire or from burns.

These grim truths were recently aired over the radio by State Fire Marshal McConnell of the Department of Commerce.

Mr. McConnell further observed that nearly 1,000 fires occur in homes each day—and a total of more than 5,000 fires happen to this country annually. Money saved of all these fires is the result of some careless act—lighting cigarettes, playing with matches, using flammable materials carelessly. Many accidents do not even occur in a fire or from burns.

At the end, Mr. McConnell urged his listeners to cooperate in their own fire prevention efforts by practicing the correct care of their homes. That would include: keeping matches, cigarettes, and other flammable materials away from where they could be used carelessly.

The problem of fire prevention moves improve the fire prevention situation and help to make our homes safer. Many accidents do not even occur in a fire or from burns.

Sho-Down Needed

By Dewitt B. Robertson

President Arthur Vandenberg, conservative in his views, in the proposed American loan to Greece, has said that it is necessary for the President to be willing to discuss everything but the issue of the American loan to Greece, which has been called a "sho-down." President Roosevelt, who is President, and the American loan to Greece, has said that it is necessary for the President to be willing to discuss everything but the issue of the American loan to Greece, which has been called a "sho-down.

Wednesday Evening, March 12, 1947

The surface area of the Great Lakes is a large one that has many people who have

enjoyed them for many years. Some of the lakes are much larger than others, and the

people who live near them often speak of the need for better water supplies. In

this area, water is a valuable resource that is used for drinking, cooking, and

many other purposes. The Great Lakes are also important for recreation and

transportation, and they have played a key role in the economic development of

the region. As a result, there is a need to ensure that water is available in

adequate quantities and of good quality. In order to meet these needs, it is

important to manage the use of water resources carefully and to invest in

infrastructure that can help to meet the demand. In the future, it may also be

necessary to develop new sources of water, such as desalination plants or

water recycling systems, in order to ensure that water is available in

adequate quantities and of good quality. For more information, please visit

the website of the Great Lakes Commission.
