Acreage Allotments
For 1970 Tobacco
Crops Are Released

WASHINGTON — The
Agriculture Department Friday
announced that the 1970 allota-
tions of tobacco for the nation's
farmers will be released Monday
with 8,000 acres set aside for
fire-cured and dark air-cured
types. The allotment is 85.9 per-
cent above the target allotment
of 14,370 acres. The new allota-
tion is 12.9 percent above the
allocation of 8,000 acres in 1969.

For a 72-day period from July 11 to
August 24, farmers will be allowed to
choose the type of tobacco they wish
to grow. The allotments are based on
the number of acres a farmer has
planted to tobacco as of July 1.

The production control pro-
gram, which was implemented in
1967, has been expanded for the
1970 season. A total of 71 allota-
tions of tobacco for the nation's
farmers will be released Monday
with 27,550 acres set aside for
fire-cured and dark air-cured types.
The production control pro-
gram includes 27,550 acres of the
allotments, those increases include:

"In 1970 Tobacco Crops Are Released" is the title of the article. The text begins with "WASHINGTON — The Agriculture Department Friday announced that the 1970 allotees of tobacco for the nation's farmers will be released Monday with 8,000 acres set aside for fire-cured and dark air-cured types. The allotment is 85.9 percent above the target allotment of 14,370 acres. The new allotment is 12.9 percent above the allocation of 8,000 acres in 1969.

For a 72-day period from July 11 to August 24, farmers will be allowed to choose the type of tobacco they wish to grow. The allotments are based on the number of acres a farmer has planted to tobacco as of July 1.

The production control program, which was implemented in 1967, has been expanded for the 1970 season. A total of 71 allotments of tobacco for the nation's farmers will be released Monday with 27,550 acres set aside for fire-cured and dark air-cured types. The production control program includes 27,550 acres of the allotments, those increases include:

- 7,500 acres for fire-cured types
- 20,050 acres for dark air-cured types
- 7,500 acres for fire-cured and dark air-cured types

The production control program is designed to limit the total amount of tobacco grown in the United States to 27,550 acres. This is intended to ensure that the tobacco market remains stable and that farmers are not overproducing.

Farmers must submit their allotments to the Agriculture Department by August 24.

The text goes on to discuss the specific allotments for different types of tobacco and how farmers are to choose which types to grow. It also mentions the importance of the production control program in maintaining a stable market for tobacco products.

The layout includes classified ads, letters, and a calendar.
How They Were Drafted

FIRST ROUND

SECOND ROUND

THIRD ROUND

Drafting Order

Dear Abby:

I have a problem. My husband and I are planning a trip to Europe in the near future, and I am concerned about our children. We have two children, ages 10 and 12, and I am afraid they will not be able to handle the long travel time and the distance. What can I do to make sure they are prepared for the trip?

Sincerely,
[Anonymous]

DEAR [Anonymous]:

It sounds like you are concerned about your children's ability to handle the trip to Europe. There are several things you can do to prepare them:

1. Discuss the trip with them: Explain to them where you will be going, what countries you will visit, and what they can expect to see and do. This will help them feel more comfortable and excited about the trip.

2. Get them involved in planning: Let them help choose the places you will visit, the activities you will do, and the attractions you will see. This will give them a sense of ownership and responsibility.

3. Prepare them for the cultural差异: Teach them about the cultures they will be visiting, such as etiquette, language, and customs. This will help them be more respectful and knowledgeable about the places they will visit.

4. Practice traveling: Go on short trips or family vacations to experience different modes of transportation and to get used to being in a different environment.

5. Encourage them to be independent: Allow them to make some decisions and choices, such as selecting their own clothes or choosing what to eat for meals. This will help build their confidence and decision-making skills.

By preparing your children in these ways, you can help ensure they are ready for the trip to Europe. Good luck!

Sincerely,
[Abigail Van Buren]
KENTUCKY BIRD NOTES

By Kentucky Ornithological Society

K. O. S. groups now cover, on the designated date, the major waterways from Hickman County down to and including the lower section of Lake Cumberland. Results of the counts have been outstanding. Eagles have been found at the Bend of the River in Hickman county, around the reserve areas and islands of Bullock and Kentucky lakes, Bullock Ferry, Wayne Rural, Davis, and Minner. There are birds of prey throughout the area. The highest count was in 1966, when 49 bald eagles were reported. In addition, there are golden eagles which are found in Kentucky. These raptors are of great importance to the state and should be protected at all costs.

Eagles are protected by both state and federal laws. Eagles are extremely sensitive to pressure from killing or poisoning one.

The bald eagle is facing a difficult time trying to survive. Logging operations destroy much of their habitat, and the eagle is a Ground Nesting bird which is sensitive to disturbance. Outdoor recreational activities have increased the number of sightings. Eagles are decreasing the population.

We want to keep the eagle flying over Kentucky waters. Perhaps we will see eagles in the future, as it is a possibility to see one nesting near water.

Mr. Trophy Himself

THE KENTUCKY MUSKELLUNGE

Give a fellow a choice of the most wonderful fresh water fish in the world and he'll probably tell you it's the Muskie.

The Muskie is the largest member of the pike family and is one of the largest fresh water fish. The average size varies from 15 to 25 pounds. The largest yet taken from Kentucky waters weighed 39 pounds and 14 ounces. This fish cannot be recognized as a record simply because the fisherman caught the Muskie. Even Einstein couldn't make up his mind for quite a long time. The Muskie is a very difficult fish to catch and is considered a challenge for even the most experienced fishermen.

The Muskie is a shy and rather suspicious fish. It is found in lakes, rivers, and ponds throughout the state. The Muskie is a proponent of the belief that it is the best of all fresh water fish.

The Tallymaster is a hand-operated adding machine that was advertised as being able to breeze through calculations with ease. It was manufactured by Victor. The advertisement mentions that the Tallymaster can handle up to $1,000,000 worth of printing, making it a permanent tool for businessmen.

A new feature of the Tallymaster is its ability to whisk through calculations with ease, making it a valuable tool for businesses. The advertisement also highlights that the Tallymaster is manufactured by Victor, a company known for its high-quality products.

Businessmen's Educational Food to crusade against waste

WASHINGTON (UP) - Sen. William Proxmire (D-Wisc.) said it was time to make a crusade against waste and the misuse of federal funds.

Referring to structural weaknesses in the government's C-5 transport planes, which he said were unsafe and unprofitable, Proxmire said that a government-commissioned study done five years ago, which estimated the C-5 would cost $32 billion to build, had been overtaken by events.

Proxmire, speaking before a meeting of the American Society of Naval Engineers, said that it was time to make a crusade against waste and misuse of federal funds.

Proxmire said he believed that the C-5 was a grossly inefficient and unprofitable plane, and that the government had been Duped by overly optimistic estimates of the plane's cost and performance.

Proxmire said that he believed that the C-5 was a grossly inefficient and unprofitable plane, and that the government had been Duped by overly optimistic estimates of the plane's cost and performance. He said that the government should consider scrapping the project and starting over.

WE ARE HAPPY TO ANNOUNCE
TWO NEW CERTIFICATE PLANS.

5½ %

(1) A one year single maturity certificate issued in minimum amounts of $1,000.
pays 5½% compounded daily which gives an effective yield of 5.65% on
12 months basis.

5 ¾ %

(2) A two year single maturity certificate issued in minimum of $1,000.00 pays
5¾% compounded daily which gives an effective yield of 5.92% on 12
months basis.

We are also happy to inform you that beginning February 1, 1970, Pass-
book Savings Accounts interest will be increased from 4% to 4½%. This
interest will be compounded daily for an effective yield of 4.6% for a 12
months period.

Our 5 PLUS 5 PLAN for 3 months, 6 months and 12 months automatically
renewed Certificates remains the same. Five percent interest compounded
daily for effective yield of 5½% for 12 months basis. This rate guaranteed
for five (5) years. If you wish to transfer to the new long term higher rate
Certificates you may bring in your old Certificate at its next maturity date.

Golden Passbook Plan remains the same. Five percent daily interest for ef-
fec tive yield of 5½% on 12 months basis. May add to account anytime:- with-
drawals on any quarter after 90 days.
